

VULNERABILITY ASSESSMENT REPORT

Website Tested: <http://testphp.vulnweb.com>
Assessment Type: Passive (Read-Only)

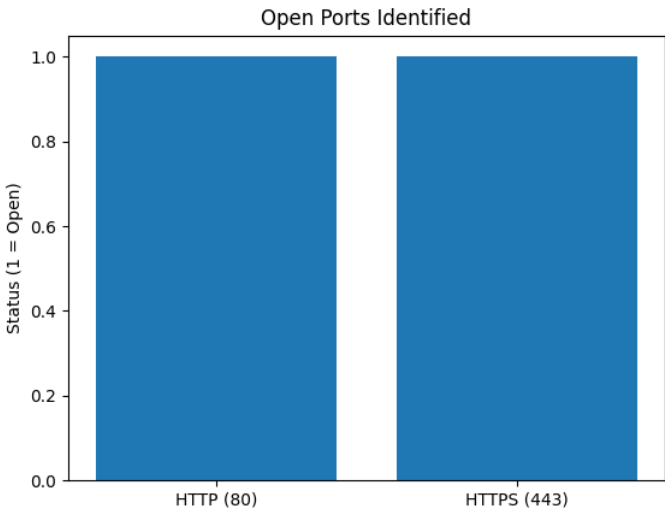

Executive Summary

A passive security assessment was conducted on publicly accessible pages only. No exploitation or intrusive testing was performed. Several configuration weaknesses were identified.

Findings Summary

Vulnerability	Risk Level
HTTP Allowed (No Force HTTPS)	High
Missing Security Headers	Medium
Server Version Disclosure	Medium
Insecure Cookie Configuration	Medium

Evidence - Open Ports

Evidence - Missing Headers

Conclusion

The website demonstrates common configuration weaknesses. Immediate remediation is recommended for HTTPS enforcement and header security improvements.
